[www.swapnilsalvi.com](http://www.swapnilsalvi.com)

To get an engineering internship position where I can fully utilize my analytical and experimental ability. Hands-on experimental experience in heat transfer measurements of microelectronic packaging, devices and engineering materials. Solid technical understanding of fundamentals of heat transfer, thermodynamics, and fluid dynamics. Competent in thermal property measurement of solids/liquids and hands on skills of fabrication tools in the lab environment. Proficient in thermal testing and analysis using numerical modeling/simulation and computational programming. Team player with problem solving skills and ability to work independently with innovation.

## TECHNICAL SKILLS

**Scientific Programming Tools (Analysis):** MATLAB, Python, Mathematica, Vivado – Verilog/VHDL (FPGA Programming)

**Finite Element/CFD Software (Modeling and Simulation):** COMSOL Multiphysics, ANSYS Fluent, ANSYS CFX

**Experimental Design Software:** NI LabVIEW, Simulink

**Mechanical Design Tools:** SolidWorks, Creo/ProE, AutoCAD

**Thermal Characterization Equipments:** Light Flash Apparatus (LFA), Transient Plane Source (TPS), Two thickness method (Fox50), Differential Scanning Calorimetry (DSC), Thermal Imaging / Infrared (IR) Camera

**6+ months of experience in Semiconductor Processing:** Microfabrication process development and specification, wafer processing (RCA cleanup), use of strong acids like HF and piranha, cleanroom device fabrication techniques, lithography manufacturing processes, rapid thermal anneal, surface resistance measurement, dry/wet etching, thin film chemical vapor deposition, sputtering, Lithography equipment – furnace oxidation, patterning techniques, Ellipsometry

**6+ months of experience in Data Analysis / Statistical Process Control Tools:** Excel, SAS, JMP, Minitab

## EDUCATION

**Ph.D. Mechanical Engineering**

University of Texas at Arlington – Arlington, TX

**Expected – December 2021**

*GPA: 4.00/4.00*

**Master of Technology, Mechanical Engineering**

Indian Institute of Technology Ropar

**July 2016 - May 2018**

*GPA: 3.46/4.00*

**Bachelor of Engineering, Mechanical Engineering**

University of Mumbai

**July 2013 - April 2016**

*GPA: 3.58/4.00*

## PROJECTS

**Analysis of Simulated Hardware Trojan in FPGA with IR Thermography**

**December 2019 – Present**

- Coded a simulated hardware trojan and temperature sensor into the integrated circuit using Verilog/VHDL.
- Detecting its thermal behavior under various operational conditions, varying its nature and intensity.

**Effect of Pre-Post Heater Temperature & Print Speed on % Void Area in Polymer 3D Printing**

**January 2020 – June 2020**

- Implemented Design of Experiments (DOE), planned and executing the customized experiment.
- Performed experimental design, data analysis and prepared reports for the effects of preselected set of contrasts.

**Analysis of in-plane temperature field during Polymer Extrusion Additive Manufacturing**

**September 2019 – May 2020**

- Measured the in-plane (x-y) temperature field on the build plate during printing of the first layer using infrared thermography in conjunction with an IR-transparent window and mirror.
- Evaluated the key thermal aspects of filament-to-bed interactions.

**Fabrication of MOSCAP in a cleanroom environment using various IC fabrication processes**

**August 2019 – December 2019**

- Gained knowledge of basic limitations and challenges of new materials as well as 3D CMOS devices for lithography.
- Developed an understanding of the standard processes like Wafer Cleaning (RCA Cleanup), Thermal Oxidation, Ellipsometric measurements, Diffusion, Photolithography, Capacitance and Layer Resistance measurements, etc.

**Measurement of Thermal Properties of Heat-spreader and Thermal Interface Materials (TIM)**

**May 2019 – July 2019**

- Strategically planned and prepared the required sample geometry from the supplied material for subsequent tests.
- Performed the steady state as well as transient heat transfer measurement techniques successfully.

**Detection of unusual thermal activities in 3D-IC using Infrared Camera****August 2018 – March 2020**

- Designed a fixture and carried out experiments to detect unusual thermal activity in a multi-die integrated circuit packaging and recorded thermal signatures of the transistor plane using infrared camera.
- Carried out image processing using various machine learning algorithms such as Structural Similarity Index Method (SSIM), 2D Correlation Coefficient Method, etc. to detect anomalous thermal activity on the chip.
- Analyzed trade-offs in detection accuracy and speeds, as well as false positives and negatives.

**Thermal conductivity measurement of thin wires using the fin effect****August 2018 – October 2019**

- Designed an experiment to measure the thermal conductivity for different wires of similar/dissimilar diameters.
- Derived a model for thermal conductivity measurement based on the theory of heat transfer in extended surfaces.
- Measured temperature distribution data utilizing Infrared Camera and validated the experimental data with analytical model using MATLAB.
- Applying the developed experimental technique to measure thermal conductivity of composite solder wires.

---

**RELEVANT GRADUATE-LEVEL COURSEWORK**

Design of Experiments (DOE), Silicon Integrated Circuit Fabrication Technology, Advanced Metal Additive Manufacturing, Convection Heat Transfer, Thermal Conduction, Advanced Classical Thermodynamics, Analytic Methods in Engineering

---

**PROFESSIONAL WORK EXPERIENCE****Research Assistantship****August 2018 - Present****Microscale Thermophysics Laboratory, The University of Texas at Arlington.**

- Designed VIs in LabVIEW using National Instruments Data Acquisition (NI DAQ) Systems to collect the high-frequency experimental data (voltage fluctuations, temperature readings, heat flux sensor, serial communication, etc.) and used MATLAB for post-processing the collected data.
- Experienced in operating and responsible for maintaining the lab equipments - Light Flash Apparatus (LFA), Transient Plane Source (TPS), Two thickness method (Fox50), Differential Scanning Calorimetry (DSC).
- Experienced in thermal imaging using Infrared (IR) camera customized with various IR-Optical tools.
- Capable of conducting design and data analysis of multi-factor experiments (Design of Experiments – DOE).
- Equipment development – customized FDM equipment in order to characterize the thermal aspects of printing.
- Experienced in hands on skills of fabrication tools in the lab environment (Polymer 3D Printer, EOS M290 Metal 3D Printer, Fluid flow meters, Vacuum Drying Oven, Thermocouples, Pressure transducers, Glovebox, Anemometers, etc.).
